

CHEMICAL

ocean chemistry:

the behaviour and interaction of
elements in the ocean
e.g. hydrogen, sodium

task:

list as many elements found in the ocean as
you can in 3 minutes, sorted alphabetically

notes:

- there are currently no elements that begin with J, Q, or W – but if you can think of a marine chemical compound for these letters, go ahead!
- if the chemical symbol starts with a different letter than the name, it cannot be used – e.g. sodium (Na) doesn't count for 'N'!

A:

F:

K:

P:

U:
